Jumpstart Your Designs with Embedded Software Solutions.

At the heart of your technology is software, which is why it’s so critical to choose and configure it correctly. The Arrow Intelligent Systems (AIS) certified, award-winning engineers and business development professionals are ready to guide you through the software and operating system selection process, ensuring that your solution has all the requirements for a turnkey solution. Choose from options such as Microsoft® Embedded operating systems and other fully supported software brands.

The right solutions for your industry.

> **AEROSPACE, DEFENSE AND SECURITY**
  The aerospace, defense and security industries have software requirements far beyond the capability of many off-the-shelf solutions. Our diverse supplier offering supports RTOS design, reliability standards and much more.

> **DIGITAL SIGNAGE AND KIOSKS**
  Find the right content management software and operating system for your signage or kiosk technology, from ATMs to voting machines, check-in systems to gaming applications.

> **INDUSTRIAL**
  Embedded operating system design and implementation is something we do every day for industrial control, manufacturing, and test and measurement facilities. Put our unmatched experience and expertise to work on your next project.

> **MEDICAL**
  Our software solutions are ready for a wide range of applications, including CT scans, remote diagnostics, handheld devices and blood analyzers. We can also help you through the FDA certification process.

> **NETWORKING AND COMMUNICATIONS**
  We provide the software and operating systems you need to build innovative voice and data networks according to your specifications.

Are You Five Years Out?

At Arrow, we partner with companies like yours, delivering insights for M2M, OEM computing and other embedded solutions. Let us help you harness the potential of things that think, so you can bridge the gap between today and Five Years Out. Are you ready to make what’s smart even smarter? Then let’s get to work.
